SUMMARY

Biomedical Engineer and MSc Data-driven Health student at KTH with experience in Medical AI, computer vision, and clinical datasets. Research-oriented and hands-on, with experience building ML pipelines, running experiments, and tackling open-ended problems from first principles. Seeking an internship or thesis opportunity in Medical AI, medical imaging, or clinical machine learning.

EXPERIENCE

Clinical Data Annotator *March 2026 – Present*
Neko Health *Stockholm, Sweden*

- Collaborate with the Data Science team to annotate and review medical images, generating high-quality data for AI model development
- Ensure consistent and accurate annotations across large-scale medical imaging datasets, handling ambiguous cases and maintaining strict data quality standards

AI Fellow *Apr 2024 – Oct 2024*
Fusemachines *Remote*

- Completed intensive training in machine learning, computer vision, and deep learning, applying models to healthcare datasets
- Developed a brain tumour segmentation model using the BraTS2021 MRI dataset, achieving a 0.72 mean Dice score

Biomedical Engineer *Nov 2023 – Jan 2024*
National Electro-Tech Pvt. Ltd. *Kathmandu, Nepal*

- Maintained and serviced clinical equipment including ventilators, ultrasound machines, and patient monitors
- Delivered training to healthcare professionals on the usage and upkeep of critical care devices

EDUCATION

MSc in Data-driven Health *2025 – Present*
KTH Royal Institute of Technology *Stockholm, Sweden*

BE in Biomedical Engineering *2018 – 2023*
College of Biomedical Engineering and Applied Sciences *Lalitpur, Nepal*

PROJECTS

Treadmill-based Gait Analysis saugatme/gait-analysis
Engineered a multimodal gait analysis system combining MPU sensors, force-sensitive resistors, and marker-based motion tracking. Developed a marker-based computer-vision gait analysis pipeline for joint tracking, kinematic angle estimation, and gait-cycle analysis from video.

Healthcare Nanochat saugatme/healthcare-nanochat
Trained a GPT-style healthcare LLM from scratch on MedQuAD and MedDialog, implementing custom BPE tokenization and safety evaluation.

WSI Preprocessing Pipeline saugatme/wsi-preprocess
Developed a scalable whole-slide image preprocessing pipeline for liver histology, combining tissue masking, tissue-aware tiling, blur detection, and parallel processing on HPC infrastructure.

SKILLS

Programming:	Python, MATLAB, SQL, R
ML/DL:	PyTorch, TensorFlow, Scikit-learn
Data:	NumPy, Pandas
Medical AI:	Medical Image Segmentation, Computer Vision, Clinical Data Annotation
Tools:	OpenCV, Git, HPC/SLURM, Arduino, Selenium, BeautifulSoup

CERTIFICATIONS

2025 Unsupervised Learning, Recommenders, Reinforcement Learning – Stanford / DeepLearning.AI
2024 AI for Medical Diagnosis – DeepLearning.AI
2024 Supervised ML: Regression and Classification; Advanced Learning Algorithms – Stanford / DeepLearning.AI
2024 Microdegree in Artificial Intelligence – Fusemachines

PROFESSIONAL AFFILIATION

Nepal Engineering Council – Certified Registered Engineer in Biomedical Engineering (Licence #83961)
